Press ALT & ENTER to download a PSI file. Press CTRL & TAB to edit the PSI file (use arrow keys to select items) Press CTRL & SPACEBAR to execute a macro Press CTRL & SHIFT & DEL to delete a macro Restart macro from the first line Change the header of the macro, press F5 to see If a line or a point on the chart changes the chart colors, Save it to the.psi file. When you open it again, the chart will restore to the original colors. KEYMACRO can read the following file formats: ASCII, Data Stream, Wave.The invention relates to a load cell with a magnet, which is arranged in a hydraulic tank, which has a connection for a pressure line, which comprises a measuring conduit, which has a coupling for the pressure line and which is formed by a substantially cylindrical housing with a bottom, into which the magnet is inserted, and a shield which shields the magnet from magnetic fields, the shield comprising a first shielding part and a second

shielding part, which are of equal length, the shield being arranged with an axial spacing from the magnet and from the connection for the pressure line. Such load cells are, for example, used in a tripod construction. The measuring conduit is connected to a pressure line, which is connected to a liquid supply. With a supplied pressure, which is higher than the atmospheric pressure, the measuring conduit is supplied with a liquid. With a partial leakage of the liquid, the load cell is supplied with a liquid, so that the load cell is loaded. The pressure line is connected to a measuring device for measuring the supplied pressure. The load cell is connected to a weighing device, for example a scale. The weighing device then determines the weight of a load connected to the load cell. For example, DE 101 01 185 A1 describes such a load cell. The load cell is formed by a substantially cylindrical housing with a bottom, which is arranged inside a tank. The hydraulic tank is filled with a first shielding part, which surrounds the magnet. The magnet is formed by a metal element, which can be put into a suitable magnetic field. The measuring conduit is connected to a pressure line, which is connected to a liquid supply. In this case, the liquid is a hydraulic liquid. The measuring conduit is formed by a metal conduit, which is inserted into a corresponding opening in the housing. The pressure line is connected to a measuring device, which supplies 1d6a3396d6

ProStat software was specially designed for scientists and engineers, and minimal computer experience is required. Nine tutorial lessons are included to give users a quick start. ProStat provides a powerful data sheet in which you can enter your data and begin analyzing immediately. You can also easily generate data from a variety of predefined functions. For data analysis, ProStat includes a full range of basic statistical methods and advanced multivariate statistical methods. For commonly used distributions, ProStat provides a convenient facility for conversion of area probabilities and critical values. ProStat also provides many mathematical methods for data manipulation, such as mathematical transformation, numerical integration and differentiation, and FFT. ProStat has a powerful plot window in which you can easily plot your data and statistical results. More than twenty 2D and 3D plot types are built in. A variety of plot-editing tools enable you to achieve publication-quality graphs. Your graphs can be easily exported into fifteen popular graphic formats for use in your word processing or presentation software. Here are some key features of "ProStat":

- ☐ New plot wizard will create your desired plot in a more convenient and intuitive way.
- ☐ New methods for nonlinear regression: simplex method and Powell method.
- ☐ Dunnett test for the data mean comparison with control group.
- ☐ Kruskal-Wallis nonparametric multiple comparisons.
- ☐ Enhanced dose-response analysis: calculation of LD/LC and its confidence intervals at any desired probability level (such as LD25, LD50, LD70,.).
- ☐ With the new programs, you can directly export your plots in the PDF file with a few clicks of your mouse.
- ☐ Improved multiple levels data sorting for both balanced and unbalanced data.
- ☐ Enhanced mathematical transformation with references to column and cell indices.

- ☐ The enhanced status bar will

What's New in the?

"ProStat" is a software package developed by CRITIS (for experimental designs in experimental science and engineering. It includes an array of powerful data analysis tools for the analysis of mean response, dose-response, and time-course data. For the analysis of variance, it includes a data sheet, a cluster plot, and a cluster comparison test. For the analysis of nonlinear regression, it includes the two-stage method and the classical method. For the analysis of dose-response data, it includes the Dunnett test, the Kruskal-Wallis nonparametric multiple comparisons, and the extension of the straightened Weibull plot. For time-course data, it includes the lag-time test and the envelope plot. New Feature: Support for parallel data ProStat now supports adding multiple experimental groups in a dataset and the additional experimental groups can be

analyzed simultaneously in a single session. This new feature provides the power to analyze large datasets in a convenient way and reduces the time to the end result. See the section "Incorporating new feature in Prostat" to see how to start using this new feature. Version History: *1.2.8:* *1.2.7:* The software was updated to support Windows 7. Fixed a bug in calculating the intervals for confidence intervals of the parameters. Enhanced file saving and loading features for batch plotting. If you were using version 1.2.5 and a graphical problem occurred when you tried to save your plot, you are still able to save the plot. However, the saved plot is in the form of a text file which does not support the function of importing the plot into the next version of Prostat. You can still copy the content of the file into a new file and use it in the next version of Prostat. *1.2.6:* This release includes the following fixes: 1.2.4: This release includes the following fixes: (1) The command line utility was fixed and its output was cleaned up.(2) The text extraction function was fixed. This improved the speed of extraction. 1.2.3: This release includes the following fixes: (1) A new external linker was added to Prostat for adding external links to the legends and data labels.(2) The program will display the color names of axis or data labels.(3) A bug was fixed in the program when converting the specified precision level to a number of iterations in the general NU-mean algorithm.(4) The program will now automatically convert the time data to the format of the x-axis if the specified time range is set.(5) A bug was fixed in the program when the number of iterations exceeded the specified value.(6
